~~Exception management~~

Exception management

Exception handling

To handle exception which makes the program
run with stopping or breaking.

Default exception - E

Custom exception - super of

System error - System related

Concept to call exception

try	- block
catch	- exception
finally	- always executing
throw	- manually throws exception
throws	- declares an exception for the caller to handle.

try {

catch () {

}

//_

Throw : (within a function)

To explicitly throw an exception

Syntax

throw new exceptiontype ("Error message")

Throws :

used to throw multiple exception

near a function or method.

Syntax :

return type method name() throws exception type

• getMessage()

custom exception

Syntax

class exceptionname extends Exception {

exception name (String msg) {
 ~~super~~ super(msg)

}
