

Packages :

A package is a collection of
classes
Interfaces
Sub-packages

~~It~~ A folder with similar file types.

Syntax :

```
package packagename;
```

```
public class classname;
```

```
{
```

API - Application program interface.

↓

Pre-defined model

Types of package :

> Built-In

> User defined.

Static Import :

It allows to access members (variable or methods) of a class directly without using the class name.

Access modifiers :-

Types:-

public	→ everywhere
protected	→ package + subclasses
default	→ package only
private	→ class only

Encapsulation :-

Data Binding

```
graph LR; A[Data Binding] --- B[variables]; A --- C[methods];
```

It restricting direct access from outside.
