

Interface

It's an blueprint of a class

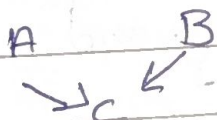

It has abstraction without body.

↳ empty class

⊕ The inherited class of this Interface can only give it's functionality.

→ To achieve multiple Inheritance:

Java cannot do multiple Inheritance natively

→ To achieve Abstraction:

It helps in hiding implementation details

All Interface are public and abstract.

function call

main class

Interface

function

Final keyword:

It is an non-access modifier

It make the things non-changeable

Ex: `final int x = 10;`

The value 10 is not changeable anymore

It restricts the process of modified, overridden,

instanceof keyword

This in Java checks the relation of a class and the object and returns True or false.

Object is instanceof class: → syntax
