

List Interface

List - mutable

Allows duplicate

Accessed by index value

maintain insertion order.

Syntax

```
List Datatype listname = new ArrayList<>();
```

```
listname.add("value");
```

```
listname.size();
```

Array List

Fast accessing data through indexing

grows automatically.

Allows duplicates

Linked List

It links another list at the end of this list

Vector

vector is also dynamic ~~eg.~~ but it is synchronized, meaning it is thread-safe.

Stack

The order of/for stacking data on top of another data so LIFO

Last-In-First-Out.

Set Interface

It is a group of unique elements

no duplicates

Hash set

- faster no maintained

Linked Hash set

- maintains the order set

Tree set

- order in ascending order.

Hash map :

Dictionary storage
